

Subil Z

ENDOTHERAPEUTIC

PRODUCT FOR ENDOTHERAPY

Main features:

Endotherapy is an innovative and ecological method for plant protection, particularly suitable for urban green. This technique avoids the dispersion of chemical substances in the environment, protecting soil, water and fauna, and is safe for the health of citizens. It consists in the direct injection of nutrients or phytosanitary substances into the trunk of the plant, exploiting the vascular system to distribute them in a targeted way and without drift effects. **SUBIL Z** is a specific adjuvant for endotherapeutic treatments, designed to improve the effectiveness of blended products such as insecticides and nutrients

Mechanism of action

SUBIL Z optimizes the absorption and distribution of the injected plant protection product, facilitating transport through the xylem to the foliar apparatus. Its formulation allows a uniform and rapid spread of the treatment, enhancing the effectiveness of the injected substance and ensuring optimal protection or nutrition of the plant.

COMPOSITION

Mixture of surfactants

C.P CHARACTERISTICS

pH 7.20 +/- 0.5
Density..... 1.05 +/- 0.5
Color Rose
Smell Characteristic
Solubility Miscible

FORMULATION

Liquid

CLASSIFICATION

No one

PACKAGING

Bottle.....1 L
Tank.....5 L
Tank.....10 L

APPLICATION

INSTRUCTIONS FOR USE

SUBIL Z must be mixed in a 1:1 ratio with the product to be injected

- Shake well before use
- Avoid use during the hottest hours of the day
- It is advisable to test some plants for varietal tests before treating the whole surface
- Application on stressed plants is not recommended
